

Tee Saver™ Token (NLGOLF)

WHITEPAPER

NeverLostGolf™ - From Physical Innovation to Digital Utility

Version 1.0

October 2026

N.L.G.L.T. Companies / NeverLostGolf™

Official project email: nlg-info@neverlostgolf.com

Website: <https://neverlostgolf.com>

1. Executive Overview

Tee Saver™ Token (NLGOLF) is the digital rewards and utility token of the NeverLostGolf Tee Saver™ ecosystem. It is deployed on Base as a fixed-supply, non-upgradeable ERC-20 token intended to support consumer rewards, loyalty, approved promotions, product-related benefits, ecosystem participation, and future utility programs.

NLGOLF was created as a digital extension of an established physical-product business rather than as a substitute for that business. NeverLostGolf™ and the Tee Saver™ originated from a practical golf problem: golfers repeatedly losing or retrieving tees on driving ranges and golf courses. The physical product was developed over many years, with the NeverLostGolf concept existing before 2000.

The production NLGOLF smart contract was deployed on Base Mainnet in September 2026. Exactly 1,000,000,000 NLGOLF were created at deployment. The contract contains no post-deployment minting mechanism. The full supply was allocated at launch among six designated treasury categories, including a 150,000,000 NLGOLF Company Reserve held through a separate time-lock contract.

NLGOLF does not represent equity, ownership of NeverLostGolf, dividends, royalties, franchise rights, territorial rights, intellectual-property ownership, or a contractual promise of profit or appreciation. Its intended role is consumer and ecosystem utility.

2. NeverLostGolf™ Company and Brand

NeverLostGolf™ operates in the sports and golf industry and develops products centered on the Tee Saver™ concept. Michael Carnell is the inventor of NeverLostGolf and serves as Managing Director.

The NeverLostGolf product concept predates the year 2000 and developed over an extended period. The company's Executive Summary describes the Tee Saver™ and Tee Saver Mat System™ as physical products designed to address recurring problems associated with golf-tee loss, retrieval, practice, and course etiquette.

NeverLostGolf has pursued intellectual-property protection for its brand and products in multiple jurisdictions. Its international trademark program includes WIPO International Registration No. 1883425. Public-facing claims concerning current patent or trademark status should be read together with the official records of the applicable intellectual-property office.

3. Origin of the Tee Saver™

The Tee Saver™ originated from direct observation of golfer behavior. Michael Carnell observed golfers walking several feet onto driving ranges to retrieve displaced tees, creating an avoidable safety concern. He also observed golfers interrupting the flow of play while searching for tees displaced during a shot.

Those observations led to the development of a simple physical concept: retain the golfer's tee close to the teeing position without materially interfering with the golfer's club or swing. The resulting Tee Saver™ is a reusable golf-tee retention device designed for use on driving ranges and golf courses.

The physical-product history is important to the NLGOLF project. The token was not created first with a product story added afterward. NLGOLF is intended to extend an existing NeverLostGolf product ecosystem into a digital rewards and utility layer.

4. Physical Product Ecosystem

The NeverLostGolf Tee Saver™ is designed to attach to a standard golf tee and help prevent the tee from being lost after impact. The company's product materials describe use on both natural and artificial practice surfaces and emphasize time-saving, tee retention, concentration, and safety-related benefits.

NeverLostGolf has also developed the Tee Saver Mat System™, which integrates Tee Saver positions into an artificial hitting surface. The broader commercial concept allows the Tee Saver brand to participate in direct-to-consumer sales, golf pro shops, sporting outlets, online commerce, promotional programs, and approved distributor or territorial arrangements.

NLGOLF is intended to complement this physical ecosystem, not replace it.

5. Why NLGOLF Was Created

The purpose of NLGOLF is to provide a blockchain-based rewards and utility mechanism that can operate across the NeverLostGolf ecosystem. A digital token can provide a consistent unit for approved rewards, loyalty programs, referrals, promotions, community participation, product-related benefits, and future authorized integrations.

The design principle is simple: keep the token technically straightforward and build useful programs around it. Business logic for rewards, promotions, eligibility, and consumer programs is intended to remain outside the core ERC-20 contract whenever practical.

6. Token Identity

Public Project Name	Tee Saver™ Token (NLGOLF)
On-chain Name	Tee Saver Token
Symbol	NLGOLF
Blockchain	Base Mainnet
Token Standard	ERC-20
Decimals	18
Maximum / Initial Supply	1,000,000,000 NLGOLF
Architecture	Fixed-supply, non-upgradeable
Production Contract	0x9314C3EE29149e6fa4274973FE736FE2e7813070

7. NLGOLF Utility and Ecosystem

Subject to published program rules, legal review, availability, and jurisdictional requirements, NLGOLF may be used in connection with approved NeverLostGolf ecosystem activities such as:

- Consumer rewards associated with qualifying NeverLostGolf purchases.
- Customer loyalty and product-registration programs.
- Approved referral programs and promotional campaigns.
- Golf-related challenges, community participation, and brand activities.
- Product discounts, promotional merchandise, special offers, or members-only benefits.
- Early access to designated products, promotions, or approved events.
- Future merchant, distributor, country-operator, or partner integrations approved by NeverLostGolf.

Specific utility may change as the ecosystem develops. Possession of NLGOLF does not automatically create a right to any permanent benefit, product, discount, event, franchise, territory, distributorship, or commercial relationship.

8. Fixed Supply and Allocation

Exactly 1,000,000,000 NLGOLF were created at production deployment. No additional NLGOLF can be minted under the deployed token contract.

Allocation	Percent	NLGOLF
Consumer Rewards	40%	400,000,000
Ecosystem Development	20%	200,000,000
Company Reserve	15%	150,000,000
Marketing & Community	10%	100,000,000
Strategic Partners	10%	100,000,000
Technical Development	5%	50,000,000
TOTAL	100%	1,000,000,000

9. Treasury Structure

At production deployment, the fixed token supply was distributed among six designated treasury destinations. This structure separates major economic functions instead of holding the entire supply in a single general-purpose wallet.

Treasury	Address
Consumer Rewards	0x1E02ab84c00FcD66104Cbb48Dd2FEf6f8a182C3f
Ecosystem Development	0x66cb7bB41F6A79f96680d8d7f8D5Be7210CDAb86
Company Reserve Destination	0xdFA522eA9333c4BAFfB3343115CDFb73267A1376
Marketing & Community	0xA49b56E5a6B8155E2654cbE81b553D6904602F94
Strategic Partners	0x9A0C54E7682487883E11b9e364944D0AccA38c3B
Technical Development	0x0251bEc1952518a3f0c3FA6C8A5E24468446A1a7

10. Company Reserve Lock

The 150,000,000 NLGOLF Company Reserve was placed into a separate production lock contract rather than directly into general circulation.

Item	Production Detail
Reserve Lock Contract	0x92904FA955636A79C7ebEFB88c15D1681A43d513
Locked Amount at Launch	150,000,000 NLGOLF
Initial Lock	First 365 days: 0 releasable
Days 366-730	Maximum cumulative release: 15,000,000 NLGOLF
After Day 730	Remaining reserve becomes releasable under the contract schedule
Fixed Destination	0xdFA522eA9333c4BAFfB3343115CDFb73267A1376

The release function does not permit callers to redirect released reserve tokens to an arbitrary address; releases are directed to the fixed Company Reserve destination encoded for the production reserve structure.

11. Smart Contract Architecture and Security

The production NLGOLF token uses a deliberately limited ERC-20 architecture. The design avoids features that would unnecessarily complicate token behavior or create hidden supply or pricing mechanisms.

- Fixed initial supply of 1,000,000,000 NLGOLF.
- No post-deployment mint function.
- Non-upgradeable token architecture.
- ERC-20 burn capability.
- Emergency pause capability.
- Two-step ownership transfer pattern.
- No transfer tax or automatic transaction fee.
- No rebasing or reflection mechanism.
- No automatic liquidity mechanism.
- No oracle-based pricing logic.
- No staking, lending, yield, dividend, or profit-distribution logic in the token contract.
- No franchise, territorial, trademark, or company-ownership rights encoded in the token.

The production token and Company Reserve Lock source code have been publicly verified on BaseScan.

12. Administrative Control and Multisignature Safe

Administrative ownership of the production token is assigned to a 2-of-3 Safe rather than to a single externally owned wallet. This means two authorized signer approvals are required for Safe-controlled administrative actions.

Production owner Safe: 0xc387117db12513f4ac5534029bEDbe7AB445C2DF

The pause capability is intended as an emergency-protection mechanism. It does not create a right to mint additional supply or alter the fixed token allocation retrospectively.

13. Commercial Ecosystem and Distribution

NeverLostGolf's established commercial concept includes direct product sales, online commerce, golf-industry outlets, promotional opportunities, and authorized international distribution or territorial relationships. NLGOLF is

intended to provide a common rewards and utility layer that can be integrated into approved parts of this ecosystem.

Potential future integrations may include consumer rewards for purchases, referral incentives, approved distributor programs, golf promotions, loyalty benefits, and selected merchant or event uses. Any such program will require its own published rules and may be limited by geography, eligibility, technology, inventory, or applicable law.

NLGOLF is not itself a franchise agreement, distributor agreement, territorial license, or trademark license.

14. Project Leadership

Michael Carnell is the inventor of NeverLostGolf and Managing Director of N.L.G.L.T. Companies / NeverLostGolf™. The NeverLostGolf Executive Summary describes his background as a former All-American high-school and college football player, professional football player, sports enthusiast, and inventor.

The project may work with professional golfers, technical specialists, advisors, distributors, and other commercial partners through separate arrangements. Public project materials should identify only persons whose roles and professional profiles are current and authorized for publication.

15. Intellectual Property and Brand Protection

NeverLostGolf has pursued intellectual-property protection for its brand and products. The international trademark portfolio includes WIPO International Registration No. 1883425. NLGOLF does not transfer or fractionalize ownership of NeverLostGolf trademarks, patents, product designs, company assets, or other intellectual property.

Use of NeverLostGolf™, Tee Saver™, NLGOLF branding, logos, and related commercial identifiers remains subject to applicable ownership, licensing, and brand-control rules.

16. What NLGOLF Does Not Represent

- Equity or shares in NeverLostGolf or an affiliated company.
- A dividend, royalty, revenue share, or contractual profit participation right.
- Ownership of NeverLostGolf trademarks, patents, products, or other intellectual property.
- Automatic franchise, distribution, territorial, licensing, or management rights.
- A promise that NLGOLF will obtain or maintain any particular market price.
- A guarantee of liquidity, exchange listing, public trading, appreciation, or resale.
- A representation that the NeverLostGolf business value is equal to NLGOLF market capitalization.

17. Market Status and Valuation

At the date of this whitepaper, NeverLostGolf has not established an official public trading market or official market price for NLGOLF. Accordingly, internal utility references, business valuations, intellectual-property valuations, or accounting references should not be represented as an independently established public market price for NLGOLF.

If public liquidity, exchange access, or other trading mechanisms are introduced in the future, market price would be determined by actual market conditions and may differ materially from any internal utility or reference value.

18. Regulatory and Risk Considerations

Digital-asset laws and regulatory requirements vary by jurisdiction and continue to evolve. Before any public token sale, public offering, exchange listing, admission to trading, investor-oriented distribution, or other regulated activity, NeverLostGolf intends to obtain jurisdiction-specific legal and compliance review as appropriate.

NLGOLF's intended consumer-utility design does not by itself determine the token's legal classification in every jurisdiction. The legal analysis may depend on how NLGOLF is offered, distributed, marketed, sold, used, and administered.

Blockchain transactions can be irreversible. Users are responsible for using compatible wallets, verifying addresses and networks, protecting wallet credentials, and understanding applicable tax and legal obligations.

19. Roadmap

The roadmap is utility-led rather than price-led. Planned development priorities may include:

- Publish the NLGOLF whitepaper and dedicated official project information.
- Expand public documentation and verified project identity across appropriate blockchain information services.
- Define initial consumer reward and redemption programs.
- Integrate NLGOLF into approved NeverLostGolf customer and promotional workflows.
- Develop partner, distributor, and international ecosystem integrations where commercially and legally appropriate.
- Establish transparent program rules, treasury procedures, and reporting practices.
- Evaluate public liquidity or trading only after business, technical, legal, and compliance requirements are satisfied.
